

YOUR COMPARATIVE GUIDE TO: FlowForma Process Automation vs Nintex K2

As the leading provider of process automation tools, FlowForma has compiled this infographic based on industry research and customer insights. This comparative guide will support you on your buyer journey, helping you better understand why FlowForma Process Automation is a good replacement for Nintex K2.

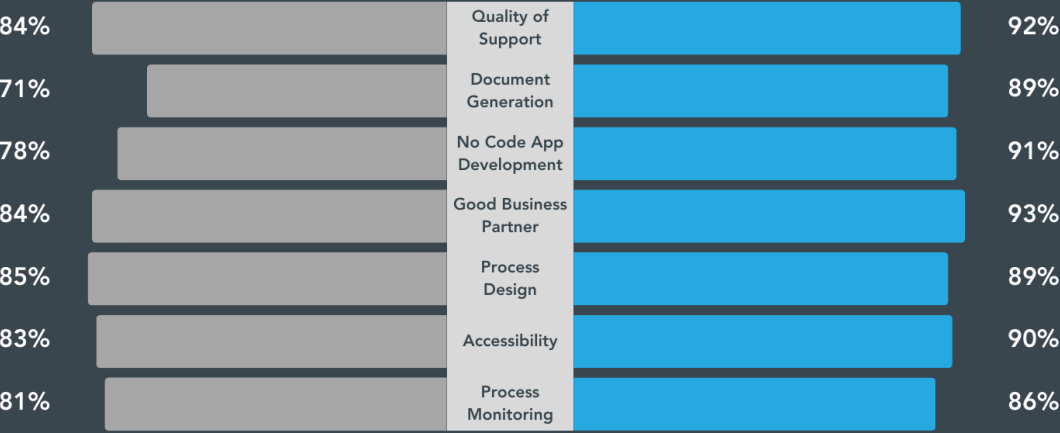

FlowForma® Empowering Process Automation	vs	K2®
All-in-one tool containing forms, analytics, workflows, and document generation	 Product Features	- Software that allows users to build apps themselves - Outdated system that no longer receives updates since Nintex Acquisition
100% no code - Quick and easy for business developers - One process build that works across all devices - Intuitive platform, made to be used by all personas throughout a business	 Coding / Development	- Requires IT development due to its complexity - Poor flexibility, deployment, and customization - Regular non-descriptive system errors with slow loading times
100% business developer tool - Short learning curve - Easy to validate / test processes - No IT skills required	 Complexity	- Requires IT resources to implement - Standard business processes can require complex configuration and extensive testing - Difficult to build and manage complex solutions
- Ease of use empowers businesspeople to build, test and deploy their own digital processes - Quick and agile which is critical for digitization at scale	 Scalability	- Building business processes can become an IT project to design, develop, deploy and test an application - Scalability is discouraged due to no future system updates and difficult templates
1-2-1 support from a team of experts - Monthly training is hosted for different levels of users - Customers receive help when building tailored solutions	 Support	- Lack of platform health monitoring - Poor support for K2 customers, they are persuaded to switch to Nintex - No product roadmap
- On average 10 times faster than traditional BPM tools - Businesses see rapid ROI - Full audit trail of processes - SureStart programme helps you get up and running fast	 Time To Value	- Unable to track value as hidden costs constantly arise - ROI can be difficult to quantify - IT developers have to build their own tracking tool within the system - No onboarding programme available
- Simple, transparent pricing - Low entry costs	 Cost	- Expensive tool with many hidden costs throughout the customer journey - Costs escalate quickly as users find themselves obliged to pay additional fees at each progressive stage.

Compare FlowForma And Nintex K2

See this side-by-side comparison below of FlowForma Process Automation vs. Nintex K2 from the software comparison site G2 Crowd, which is based on preference data from user reviews of both systems. Each product's score is calculated using real-time data from verified user reviews, to help you make the best choice between these two options, and decide which one is best for your business needs.

vs

Did You Know....

G2 identifies FlowForma as the #1 tool for Low Code App Development in the Business Process Management Category!

Why Choose FlowForma Process Automation To Replace Nintex K2?

"We looked at Nintex and K2, from our point, they were cost prohibitive. We didn't feel that we would be going down the no code route and still would need a lot of influence and support from IT, so we didn't want to pursue that.

We looked at Power Apps, which again didn't really fit the bill. Some features seemed quite good, but once we dived into it a bit more, it became quite evident we were going to need to have skills around accessing APIs and doing a bit of Java.

FlowForma Process Automation met all our requirements."

IT Manager, Costain, Skanska & Balfour Beatty
- A14 Joint Venture

"Following a demonstration of the FlowForma Process Automation tool, we instantly knew we had found the perfect fit. We chose FlowForma Process Automation mainly because of its speed - we only need to build once, no coding skills are required and it integrates seamlessly with other systems. I love that anyone can be trained up, to create powerful process solutions with the FlowForma tool.

We're going to use FlowForma Process Automation on all our projects. It makes my job much easier and saves a lot of time. The only limitation is your own imagination; it can pretty much achieve anything."

Karl Henderson,
Digital Engineering Lead, Downer Group
