

InfoPath[®] Migration ACCELERATOR

Accelerate Your InfoPath Migration with the Power of Simplicity

In January 2014, Microsoft announced that their investment in InfoPath had come to an end. With no recommended migration path in the SharePoint ecosystem, FlowForma has created its very own.

The Challenge

Organizations who currently use InfoPath as an eForms solution, are facing the challenge of finding a replacement to their depreciated and no longer supported InfoPath.

With many businesses using InfoPath since its inception in 1999, the thought of migrating can be daunting.

InfoPath Migration
Accelerator

The Solution

Dedicated to making the complex simple, FlowForma has simplified the InfoPath forms migration challenge for clients, by developing a unique InfoPath migration tool.

This tool enables FlowForma to accelerate the migration of business process steps and fields to the FlowForma Process Automation environment.

How it Works

1. Your organization can utilize the tool to migrate business process steps and fields into the FlowForma system and proceed to apply the business logic required
2. FlowForma's developers can access your InfoPath and migrate your business process building blocks over to FlowForma Process Automation, adding the correct business rules and logic as appropriate

System Requirements

- This migration tool is compatible with InfoPath 2010 and 2013 only
- Customers need to be using version FlowForma 4.0 or later
